

Radial multi-pole automatic magnetization measuring equipment

Introduction

This equipment is mainly used for magnetizing plastic magnetic multi-pole ring and measuring magnetic flux. Fast loading, four stations work at the same time, improve production efficiency. Widely used in magnetic material factory production.

Advantageous features

- Vibratory table for fast loading
- Four stations working at the same time
- Full production inspection
- Passing range value can be set
- Qualified and unqualified sorting materials
- Production counting function

Technical Parameter

- ◆ Suitable products: Plastic Magnetic Multi-Pole Rings $\Phi 5 \sim \Phi 50$
- ◆ Feeding method: Vibratory disk loading
- ◆ Discharging method: The box slipped.
- ◆ Magnetization performance: Saturation magnetization
- ◆ Measurement accuracy: 0.01mWb
- ◆ Productivity: 3 sec/piece
- ◆ External Dimensions: L1600*W900*H1400(mm)

Key processes

1. Vibratory table for fast loading.
2. Four lanes simultaneously transport the product to the magnetizing position for magnetization.
3. The magnetized product enters the test position for flux measurement.
4. Sorting out material after testing the finished software.
